

# Energy Transition

---

As the global energy industry advances a lower carbon world, King & Spalding is empowering the transition. From the established energy majors that have been the cornerstones of this industry for over a century to more recent market entrants commercializing new technologies, we guide clients throughout the energy value chain on the matters driving innovation in the energy sector.

We provide the transactional, regulatory, policy, tax and trade guidance clients need to execute first-of-their-kind and largest-of-their-kind projects that are breaking new ground in the industry, including those involving carbon capture processes; hydrogen and its derivatives; low-carbon fuels; renewable energy and battery storage; nuclear; green metals; and others. When disputes arise in relation to low-carbon projects – and for clients facing challenges related to their carbon-emitting activities – our top-ranked dispute resolution team devises and executes litigation strategies to protect the commercial viability of their projects and businesses. Our integrated global team has been on the leading edge of the industry's most significant recent developments, many of which are the first or largest of their kind, including:

- the world's first commercial-scale direct air carbon capture facility;
- the world's first green hydrogen and green ammonia megaproject, and the most advanced green hydrogen megaprojects on four continents;
- the world's first e-NG and synthetic methane projects;
- the world's first city built 100% on renewable energy; and
- a first-of-its-kind lithium extraction project, among others.
